

Water Treatment & Water Hygiene Services

In May 2006 Lakeside Water and Building Services formed a division within Lakeside to specifically provide water treatment and water solutions to industrial and commercial clients throughout the United Kingdom.

Providing a one stop shop solutions for all water related needs and requirements.

It was our aim to ensure our customers systems and management policies complied with all current legislations, achieving this through detailed site survey visits as well as sampling of water for specific analysis and reporting findings and promoting correct courses of action for Legionella Control and healthy water systems.

We have achieved this through robust water management and maintaining long term relations, providing technical expertise resulting in benefits to the client and the wider environment.

We also provide clients with a open platform to view the works achieved and works required so that there is openness, trust and honesty at all times

Lakeside's Konformance software allows quick and easy reporting, from the moment that a task is allocated to a water professional to the moment that the task is closed with all supporting documentation and reporting complete. The systems allows minute to minute vision.

This total vision gives our clients the full support that they require with total trackability.

Products and Services

Chemicals

- Full range of boiler water treatments
- Full range of cooling water treatments
- A selection of treatments for closed heating and chilled water systems
- Chemical products for pre-commission cleaning of various types of system
- Resin treatments for pre-treatment plants

Service

- Planned analytical service visits at agreed intervals
- Service reports and other documentation tailor made to each site's own requirements.
- Boiler inspection visits
- Water analysis by an independent UKAS accredited laboratory for all water-borne microorganisms including Legionella Pneumophila and other species
- Cooling system clean and chlorination in accordance with ACOP L8
- Pre-treatment plant servicing and disinfection of softener resin beds in accordance with ACOP L8
- Clean and chlorination of water storage tanks and chlorination of associated services as per ACOP L8
- Legionella risk assessment and schematic drawings
- Water hygiene monitoring, log book design and reporting

Products and Services

Dosage & Control Equipment

- A full range of electronic dosing pumps
- A full range of steam boiler dosing and control systems including sample coolers
- A full range of cooling water control equipment to fully automate dosing of inhibitors, biocides and bleed off
- Closed system dosing pots

Pre-treatment Plant

- Water softeners - from small domestic size up to large duplex industrial plants
- Reverse osmosis plants
- Dealkalisation and Demineralisation plant
- Filters of various types for a variety of applications such as cooling systems and closed system side stream filtration

Testing Equipment

- A full range of chemical testing equipment and reagents is available for all water treatment monitoring applications
