

Point-of-use RO Systems

Twist-Lock POU - RO Systems

! Convenience, practicality and performance in one 3-stage RO system

°C 38°C

! 6.9 bar

∞ SPECTRUM™

The stylish design of the SPECTRUM Twist-Lock RO system has been created to fit elegantly into any domestic or commercial application. Available as a complete system, with tank, tap, tubing, etc. or as a three stage stand-alone RO solution, the Twist-Lock system from the SPECTRUM filtration range provides a practical and flexible RO filtration solution.

Capable of removing up to 97% of most contaminants, this three stage Twist-Lock RO system utilizes two high-capacity carbon block cartridges and a high-purity RO membrane cartridge to produce 75 lpd of pure water.

The system also utilizes the same quick and convenient connections as SPECTRUM Twist-Lock single and double head POU cartridges (see page 65), which means this system requires no tools for filter change outs, making it one of the most practical and user friendly RO systems available.

The ten litre tank, available with the complete system, provides a constant reserve of on-demand RO pure water. Economical and easy-to-use these two units are wall mountable for convenience and represent an ideal space saving solution.

Similar to the individual PTL cartridges, private label branding is also possible on the PTL RO System, contact us for further information.

Ordering information

product code	description	packaging
PTLROSYSTEM-COMPLETE	Premier Twist-Lock three stage RO system complete with tank, tubing, saddle valve and tap	1 @ 7 kg
PTLROSYSTEM	Premier Twist-Lock three stage RO system	1 @ 3 kg
PTL-RO	Premier Twist-Lock - reverse osmosis cartridge	16 @ 6 kg
PTL-CB	Premier Twist-Lock - carbon block cartridge	12 @ 6 kg
