Drinking Water System

A Difference You Can Taste

Drinking the recommended eight glasses of water a day just got easier. Improve the quality of your water with a Kinetico K2 Drinking Water System and enjoy great tasting drinking water right from your tap. Eliminate the mess, inconvenience and expense of bottled water, filter jugs and tap mounted filters with a K2 Drinking Water System.

You can have peace of mind knowing that you are providing your family with high quality water for all your cooking and drinking water needs, all for a fraction of the cost per litre of other drinking water treatment options.

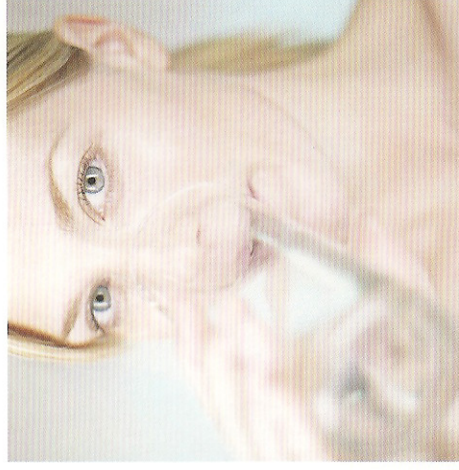

Why Reverse Osmosis?

Kinetico systems feature reverse osmosis (RO) technology, recognised and accredited by organisations such as the EPA (Environmental Protection Agency) as the most effective at significantly reducing a large number of contaminants. Not only will the K2 Drinking Water System remove unpleasant taste and odours, it will almost eliminate chlorine, lead, cysts such as cryptosporidium and, compared to drinking water filters alone, a much wider range of contaminants that may be in your water.

Convenience

With a K2 Drinking Water System, you will not have to recycle or dispose of empty bottles any more. The system can be installed under your sink or wherever is most convenient for you.

The K2 Drinking Water System's Five-Stage Process

1 A high capacity pre-filter protects the system's membrane and other components by preventing small particles or chlorine from entering the system.

2 The reverse osmosis module forces water through a semipermeable membrane, significantly reducing heavy metals and compounds such as lead and cysts such as cryptosporidium.

3 A non-corrosive storage tank stores your drinking water so it is available on demand.

4 A carbon postfilter gives the final polish to your water by reducing unpleasant tastes and odours.

5 A special, lead-free tap mounts easily onto your sink or countertop to dispense your drinking water.

K2 Drinking Water System Highlights

Quick Disconnect Filter Cartridges make filter changes easy and sanitary.

High Performance Reverse Osmosis Membrane produces higher quality water at a faster rate, so the water is ready when you need it. The system certified daily production rate is higher than most other reverse osmosis systems.

Automatic Shutoff conserves water by shutting off the system when the storage tank is full. Production is automatically reactivated on demand.

Space-Saving Design offers a variety of installation options.

Quality Construction and advanced technology provide reliable, low-maintenance operation. The K2 Drinking Water System is covered by one of the industry's longest and most comprehensive warranties.
