Tap options

Why upgrade your tap...

- ★ Compliment the style of your kitchen
- ★ Inexpensive and versatile options to suit all needs

Picture above shows the mini tap which is included in the Aqualyze Stream and Aqualyze Rapid systems. Water is dispensed 'on-demand' when the lever is pressed down, raising the lever to the fixed position will provide continuous flow.

Taps have become an easy item to replace in a kitchen to gain an immediate visual improvement, at a relatively economical price. The Aqualyze range of Drinking Water Systems has a selection of taps to accommodate the dispensing of filtered water, a variety of styles and prices to suit all.

For kitchens with two taps in a sink unit then it is a single supplementary tap that is required to dispense filtered water, which can be fixed through the surrounding work surface or sink unit. Kitchens which have a single, dispensing tap are able to take advantage of the Filter-Plus range (see reverse) which combines hot, cold and filtered water from the one unit, removing the need to have a separate, supplementary tap.

Button Tap

This tap is a one-way pillar tap, with push button operation. Comes with 1/4" connections.

Available in:-

- stainless steel

Lever Tap

This single dispensing tap has the benefit of a variable flow lever. Comes with 1/4" connections.

Available in:-

- stainless steel
